COMMISSIONER OF PATENTS AND TRADEMARKS  
Washington, D.C. 20231

SECOND SUPPLEMENTAL REISSUE DECLARATION

I, Kazumi SAKUMOTO, hereby declare:

1. That this second supplemental reissue declaration is being made to supplement my earlier declarations which comprise part of Reissue Patent Application Serial No. 08/493,979.

2. That I verily believe the original patent to be wholly or partly inoperative or invalid by reason of claiming less than I had a right to claim in the original patent because none of the original independent patent claims 1-4 are directed to a timepiece comprising:

(a) a time keeper in order to display at least hours and minutes by means of hands surmounting a dial surrounded by a bezel;

(b) a receiver capable of receiving radio broadcast messages for seeking persons, reception being triggered by the composition on a telephone handset of one of at least two predetermined and distinctive calling numbers;

(c) a memory for storing set calls;

(d) an acoustic transducer for signalling at least the arrival of a message;

(e) a control arrangement adapted to be manually actuated, and wherein at least the calling numbers are inscribed on the dial in plain language or in coded form; and

(f) means being actuated so that at least upon reception of a message such is stored in the memory and at least one hand ceases its time indicating function in order to come to show the calling number emitting the message.

3. To correct this error in claiming less than I had a right to claim, new independent claims 5 and 6 have been added. Independent claim 5 is directed to a timepiece comprising:

(a) a time keeper in order to display at least hours and minutes by means of hands surmounting a dial surrounded by a bezel;

(b) a receiver capable of receiving radio broadcast messages for seeking persons, reception being triggered by the composition on a telephone handset of one of at least two predetermined and distinctive calling numbers;

(c) a memory for storing set calls;

(d) an acoustic transducer for signalling at least the arrival of a message;

(e) a control arrangement adapted to be manually actuated, and wherein at least the calling numbers are inscribed on the dial in plain language or in coded form; and

(f) means being actuated so that at least upon reception of a message such is stored in the memory and at least one hand ceases its time indicating function in order to come to show the calling number emitting the message.

Newly added independent claim 6 constitutes a revised version of independent claim 5 and is identical to claim 5 except that it omits the language that the control arrangement is "adapted to be manually actuated."

4. That the error in claiming less than I had a right to claim in the original patent arose through lack of appreciation of all aspects of the invention at the time the original patent application was filed, and then prosecuted to issue, and, as a result, the subject matter described in

paragraph 6 above, and corresponding to claims 5 and 6, was not claimed as broadly as I had a right to claim.

5. That the error in claiming less than I had a right to claim in the original patent was discovered in July of 1994 by my attorney when he reviewed U.S. Patent No. 5,329,501 which issued July 12, 1994. The review of the '501 patent was conducted by my attorney who regularly monitors all U.S. patents which issue in the field of pagers, particularly timepieces provided with a pager function. During review of U.S. Patent No. 5,329,501, which is directed to a timepiece with a pager function, my attorney discovered that the subject matter of claim 1 of the '501 patent (which substantially corresponds to newly added independent claim 5 in this reissue application) is fully disclosed in the original patent and is broader in some respects than claims 1-4 of the original patent.

6. That the aforesaid error in the claims arose entirely through inadvertence, accident or mistake and without any deceptive intent on my part, or, upon information and belief, on the part of my attorneys.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further

that these statements were made with the knowledge that any willful false statements or the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of this application or any patent resulting therefrom.

Dated: \_\_\_\_\_, 1997

Kazumi SAKUMOTO
